MICHELLA ARLENE WIJAYA RADIKA

08980092978 | michellaradika@gmail.com | linkedin.com/in/michellaarlene | Tangerang, Indonesia

SUMMARY

Computer Science student at BINUS University with hands-on experience in machine learning, NLP, and data analysis. Completed EDA and ML modeling in team-based projects spanning churn prediction, NER, and computer vision. Certified in Deep Learning (NVIDIA), Azure AI Fundamentals (Microsoft), and Python (DataCamp). Competition-proven with international placements, including 1st Runner-Up at APICTA Taiwan 2025.

EDUCATION

Bina Nusantara University (BINUS) 2024 – 2028

B.Sc. Computer Science, School of Computer Science

Grade: 3.88/4.00

PROJECTS

Customer Churn Prediction *Python, Pandas, Scikit-learn, EDA*

- Performed end-to-end EDA and built ML models using XGBoost AFT (survival time analysis) to predict customer churn for telecom company; analyzed feature importance and business findings
- Deployment: Vercel (web), Hugging Face Space (ML Model)
- Tech Stack: HTML, CSS, JS, Flask, MongoDB
- Main task: EDA, make ML Model, ML DevOps

NER Comparative Study for Resume Parsing *Python, spaCy, Scikit-learn*

- Conducted EDA on a resume dataset and implemented/evaluated 8 NLP models (HMM, CRF, BiLSTM, and BERT variants) for Named Entity Recognition; responsible for data preprocessing, feature engineering, and model benchmarking.
- Main task: make ML Model

Lane Drift Detection System *Python, OpenCV, Classical CV*

- Built a classical computer vision pipeline for lane detection using Inverse Perspective Mapping (IPM), HLS color filtering, Sobel edge detection, and polynomial fitting for drift detection (Cap FPS: 60).
- Main task: Image Processing

VoiceChess: Chess Learning App for Blinds *Python, OpenCV, Classical CV*

- Built an A11y chess-learning mobile app for the visually impaired and a multi-model CV pipeline for chessboard recognition: board detection (LRASPP segmentation), piece existence classification, rotation correction, and orientation regression using ImageNet backbones fine-tuned for chess-specific tasks. 1st Runner-Up, APICTA Taiwan 2025.
- Main role: Product Manager, DL Model

EXPERIENCE

Discrete Mathematics Tutor – SASC Sep 2025 – Jan 2026

Bina Nusantara University

- Taught discrete math to 15–70 students per session via Zoom; awarded Best Computer Science Tutor 2025/2026.
- Students achieved an average GPA of 3.88/4.00, measured through academic outcomes and evaluation ratings.

CERTIFICATIONS

- **Fundamentals of Deep Learning** NVIDIA, Apr 2026
- **Kelas Pemantapan Azure AI-900T00-A** Microsoft Elevate × GreatNusa, Mar 2026
- **Belajar Dasar AI** Dicoding Indonesia, Dec 2025
- **Introduction to Python and Intermediate Python** DataCamp, Feb 2026

- **ML Crash Course: Linear Regression + Gemini Enterprise Agent Ready** Google, Mar–Jun 2026

ACHIEVEMENTS

- [INT] 1st Runner-Up – Industrial Category APICTA Taiwan 2025 (Asia Pacific ICT Alliance)
- [REG] 2nd Winner – Scientific Writing Article BINUS Team, 2025
- [NAT] Favourite Winner & Top 10 Finalist – Hackathon ITB Arkavidia, 2025
- [NAT] Top 10 Finalist – Solve for Tomorrow Samsung Indonesia, 2025
- [NAT] Informatic National Olympics 2024

ORGANIZATIONS & LEADERSHIP

- Freshmen Leader & Freshmen Partner – BINUS University (2025–2026)
- Active member – UREEKA BINUS, BNCC, Hapkido (2025)

SKILLS

Data & ML: Python (Pandas, NumPy, Scikit-learn, Matplotlib/Seaborn), SQL, PostgreSQL
AI / Deep Learning: TensorFlow/Keras basics, NLP (spaCy, HuggingFace), OpenCV
Cloud & Tools: Microsoft Azure AI, Google Cloud (Colab), Jupyter, Git, Postman, Figma
Web (secondary): HTML, CSS, JavaScript, React, TailwindCSS
